CXT Software Expands Device Compatibility in X Mobile™.

Phoenix, AZ – June 4, 2007 – CXT Software, a leading edge provider of software solutions for the same day and expedited delivery industry, announces additional mobile devices and add-on scanners that are compatible with its flagship mobile delivery application, X Mobile.

X Mobile is a Java based application that supports cross-platform use on a vast number of different devices and configuration profiles encompassing all major cellular networks including CDMA, iDEN and GPRS networks. X Mobile may be deployed to a variety of fleets with different and occasionally unrelated business requirements. With support for a multitude of platforms, CXT Software customers may purchase an array of devices that utilize these requirements and assist in significantly reducing cost by mixing and matching configurations based on need. X Mobile utilizes the capabilities available on different hardware platforms without requiring unique compiled applications. For example, if a device has GPS capabilities, X Mobile will provide location data on the device; if a device is fitted with a barcode scanner or signature capture pad, X Mobile will enable the appropriate feature set.

X Mobile has been field tested on devices running Windows® Mobile 5.0™, Windows Mobile 2003, Palm® OS 5.4.9, and Motorola iDEN®. Hardware devices tested include Psion Teklogix's Workabout Pro, Motorola's HC700, Symbol's™ MC70 and MC35 and Treo's™ 700p and 700wx. This recent increase in compatibility of mobile devices is in addition to the industry-standard iDEN line by Motorola, including the i355 and i605 for the Sprint® Nextel Network, utilizing scanner attachments from AirClic® and PointeWare. "With X Mobile, a hybrid deployment of devices and configurations is available with ease. The ability to break free of vendor lock-in both on the hardware and cellular network side of the equation is truly a wonderful advancement in mobile technology," noted Derek Figg, CXT Software's VP of Operations.
