CXT Software Partners with Psion Teklogix

Psion Teklogix and CXT Software to provide real-time mobile computing solutions to the courier and delivery industry

Mississauga, ON, Canada – September 10, 2007 – Psion Teklogix (LSE: PON), a global provider of solutions for mobile computing, wireless data collection, imaging and RFID, today announced the signing of a co-marketing agreement with CXT Software, a leading provider of courier software and mobile resource management technology. The new agreement enables both companies to provide advanced mobile computing solutions to the North American courier and delivery industries.

After months of researching and testing the devices available in the market, CXT Software discovered that its customers preferred Psion Teklogix' rugged wireless device the WORKABOUT PRO. Customers cited the bright displays and ease of customization as key reasons. Psion Teklogix' WORKABOUT PRO handheld devices are also versatile enough to work with the X Dispatch and X Route distribution modules of its software suite. The WORKABOUT PRO also combines flexible ergonomics and user-friendly interfaces in one device.

"CXT Software is very selective about the companies we choose to partner with," said Dan Calderone, President, CXT Software. "We believe that Psion Teklogix is a top-tier provider with superior products who can address our customers' demand for more robust devices with greater functionality. Its drivers are able to interact with our software solutions through the use of GPS, signature capture and bar-code scanning capabilities to report chain-of-custody and real time over, short and damaged status. The partnership with Psion Teklogix allows CXT Software the ability to be proactive in making the latest technology available to our customers".

X Dispatch, CXT Software's flagship product, is an enterprise-level software package that accommodates unlimited rating schemes, includes address validation, and provides a comprehensive dispatch module with intelligent dispatching capabilities, the ability to locate and track drivers using realtime data, and automatically communicates proof of delivery information. X Route manages routed deliveries and offers complete route management, including contract billing, scheduled stop control, route details, bar codes, driver manifests, and more. The Distribution component allows for Automatic Shipping Notification (ASN) and Over, Shortage and Damage (OS&D) reporting, all in real time.

"CXT Software is recognized as a leading software provider in the North American courier industry, and together we will work to provide customers with the best possible mobile computing solutions available," said Ron Caines, president, Americas at Psion Teklogix. "We are excited to welcome CXT Software to the Psion Teklogix family, and look forward to fulfilling new opportunities for both our organizations."
