

— FOR IMMEDIATE RELEASE —

X Mobile Compatible with Over 30 Mobile Devices

Phoenix, AZ – September 15, 2008 – CXT Software, a leading edge provider of same-day and expedited delivery software has tested several mobile devices currently being used in the delivery industry as well as a few devices still in beta status. They are pleased to announce that over thirty devices tested proved to be compatible with X Mobile, making it the industry's most flexible mobile application. These devices ranged from Nextel mobile phones to the more ruggedized mobile computing devices such as the Psion Teklogix Ikon.

X Mobile is a Java-based mobile application that can be installed on many mobile devices, giving companies several hardware options from Java-enabled mobile phones to mobile PDA devices on any mobile network. The current application works on mobile devices from Motorola/Symbol, Psion Teklogix, Intermec, Honeywell, and others running on the major cellular networks.

From the outset, X Mobile was designed and developed to work on a wide range of devices," states Derek Figg, VP of Operations for CXT Software. "Our customers need technology that has the ability to grow with them. It is very important for them to have the ability to make choices in their software features, devices and even cellular networks. X Mobile can give them that kind of flexibility without sacrificing usability or functionality."

In addition to basic two-way email messaging to and from drivers to confirm pickups and deliveries, X Mobile gives delivery companies the capability to perform bar code scanning and signature captures while relaying all of that data back to the dispatcher in real-time. For routed deliveries, dispatchers can send route manifests directly to each driver's mobile device. From there, the user-friendly X Mobile interface walks the driver through each step of the route while instantly recording OS&D data.
